

NEED HELP

ACCESSING INFORMATION THROUGH DATABASES?

This short guide provides a quick introduction to using the Healthcare Databases Advanced Search (HDAS). To access this you will need to register for an Athens account if you haven't already. To register, go to <https://openathens.nice.org.uk/> - you will need to enter 'Airedale NHS Trust' as the organisation.

Once registered, go to www.nice.org.uk and click on Journals and Databases near the top right corner of the screen.

When you begin a search, you will need to click the 'login for all databases' link otherwise you will only be able to search using PubMed.

After logging in you will be able to choose to search within eight databases. If you hover over each one you will see a brief description. You can select as many as you like or you can choose one and then re-run your search in another later.

You can search for key terms and combine these together. You can combine two or more search lines using AND if you are looking for articles that contain all those words and you can use OR if some words are interchangeable and you want to make sure that you don't miss anything important.

<input type="checkbox"/>	22	Medline	(safe*).ti,ab	View Results (625,492)	Edit		
<input type="checkbox"/>	23	Medline	("medication").ti,ab	View Results (160,956)	Edit		
<input type="checkbox"/>	24	Medline	(self-administration).ti,ab	View Results (7,804)	Edit		
<input type="checkbox"/>	25	Medline	(22 AND 23 AND 24)	View Results (58)			

To view the results click the link on the right. You will be presented with details of the articles that match your search. To read the abstract you will need to click on Show Abstracts above the results.

You can save the results that appear useful by ticking the box next to the article title and then clicking the save button located above or below the list. In this example you can see where it says 'Add 1 to Saved'. You will need to click this button before moving on to another page of results. When you have selected everything you want to, you can retrieve these results from the saved results tab at the top of the page.

The search results will sometimes list articles without a full-text link. In these circumstances library staff may be able to help you. If we can't find it through our subscription databases, we can check to see if it is obtainable elsewhere and if it is we should be able to get a copy to you within five working days.

Search Tips

- If you are looking for a specific journal article and you know the full title, you can enter this with quotation marks at the "start and end"
- The asterisk symbol * can be used to search for alternative endings to words. For example the search term medic* will return results for medic(s), medicine(s), medication(s), medical, medicinal, medicate(s), and medicated.
- You can re-order your results by publication date to see the most recent first.

If you require any support in using HDAS and formulating search queries, please let us know. We can provide one to one and group training sessions if required.
